

English 2 Final exam

.....: الفوج: اللقب: الاسم

Read carefully the text and answer the questions

A computer system consists of two major elements: hardware and software. Computer hardware is the collection of all the parts you can physically touch. Computer software, on the other hand, is not something you can touch. Software is a set of instructions for a computer to perform specific operations. You need both hardware and software for a computer system to work.

The keyboard, the monitor, the mouse and the processing unit are the physical elements of a computer that means Hardware. However, most of a computer's hardware cannot be seen; in other words, it is not an external element of the computer, but rather an internal one, surrounded by the computer's casing. A computer's hardware is comprised of many different parts, but perhaps the most important of these is the motherboard. The motherboard is made up of even more parts that power and control the computer.

The functioning of the hardware is directed by a collection of routines, rules and symbolic languages that describe the Software. Software is capable of performing specific tasks, as opposed to hardware which only perform mechanical tasks that they are mechanically designed for. Practical computer systems divide software systems into three major groups: System software, Programming software and Application software.

Questions

1- Give the basic ideas of each paragraph. (3 pts)

- 1-
- 2-.....
- 3-.....

3- Answer the following questions from the text (4 pts)

- Which element of computer system you cannot physically touch?

.....
